

AMENDMENTS TO THE CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

1. (Currently Amended) A recording control system for controlling recording of a recording object in a recording medium with a recording apparatus, wherein a surplus signal that is outside the ~~recording sensitivity~~ recognizable range of a person but within the recording sensitivity range of said recording apparatus is applied to the recording object, and the recording object affected by said surplus signal is recorded ~~in~~ on said recording medium, the recording control system comprising:
surplus signal generation means for generating said surplus signal and irradiating said surplus signal to said recording object;
surplus signal generation control means for controlling the generation of the surplus signal and the suspension thereof;
ID transmission means for transmitting an ID assigned to said recording apparatus or to a person; and
ID recognition means for receiving and recognizing a transmitted ID,
wherein when the received ID is recognized as being a permitted ID, said surplus signal generation control means suspends the generation of said surplus signal for a prescribed period of time.
2. (Currently Amended) The system according to claim 1, wherein:

said recording apparatus is imaging means for recording a photographic image on a recording medium;

said surplus signal is barely visible light outside the recognizable range of a person; and

said barely visible light is contained within the recordable sensitivity range of said recording medium.

~~A photography prevention system of a photographic object for recording a photographic object in a recording medium, comprising means for irradiating barely visible light outside the recognizable area of a person to said photographic object, wherein said barely visible light is contained within the recordable sensitivity range of imaging means for recording an image from said photographic object in said recording medium.~~

3. (Currently Amended) The [[A]]system according to claim 2, wherein said barely visible light is infrared light.

4. (Currently Amended) The [[A]]system according to claim 2, wherein said barely visible light is directed onto a photographic object ~~irradiated~~ together with or separate from illuminating light ~~to said photographic object, and said photographic means records, and wherein~~ the reflected image ~~from~~ of said photographic object ~~in is~~ recorded on said recording medium.

5. (Cancelled)

6. (Cancelled)

7. (New) The system according to claim 1, wherein said ID transmission means is provided in said recording apparatus or a portable communication terminal.
